

IT1150 Lab 3

This lab has only a hands-on component listed below.

Start with your lab 2 html and css files or, if you had difficulty, use the lab 3 files in this repo and on the Blackboard site or, begin new files.

If your file does not already have semantic tags add: nav, main, article and footer tags (see sample file)

1. Revise your file so that the article section floats to the right and then clear the float so that the footer spans the lower part of the page (5 points)
2. Use the border-box setting to float three images side by side on one of your pages (10 points)
3. Include links to locations on the same page (using ID attributes and anchor tags) (5 points)
4. Create a two-level drop down (horizontal or vertical) menu (15 points)
5. Include the following - 10 points:
 - a. A background for both the HTML and BODY sections of your page
 - b. A favicon
 - c. An image with a figcaption
6. Be sure to use comments in your file (at the top section) to explain how you addressed all of these items (5 points)
